

## Erratum

**2020-00133 KENNEY ET AL., 39:7, PP. 1122, 1127, 1128** An author error in phrasing the interpretation of some of the findings has resulted in four changes to the text, none of which affect the article's findings or conclusions. In the abstract, a passage of text, "translating to a 47 percent reduction in obesity prevalence in 2018 from what would have been expected without the legislation," now reads, "such that obesity

prevalence would have been 47 percent higher in 2018 if there had been no legislation." In the paragraph above the subhead "Discussion," a passage of text, "in other words, a 47 percent reduction in the predicted probability of obesity," now reads, "in other words, the risk of obesity would have been 47 percent higher in 2018 without the legislation." In the first paragraph below "Discussion," a passage of text, "translating to a 47 percent reduction in obesity preva-

lence in 2018 from what would have been expected without the HHSFKA," now reads, "by 2018 their risk of obesity would have been 47 percent higher if there had been no legislation." In the final paragraph, a passage of text, "a 47 percent reduction in obesity prevalence in 2018 from what would have been expected without that legislation," has been deleted. The article has been corrected online
